

# PROSNOW Objectives

- Bringing together (seamless) within the same user interface appropriate prediction information **from meteorological (days) to seasonal (months) time scales.**
- **Fine post-processing work** for direct use of predictions by ski resorts managers, specifically address prediction uncertainty (ensemble framework)
- Account for **local conditions** in ski resorts : downscaling
- **Real-time decision making tool**, needs in-depth co-construction with partners ski resorts and beyond, production through homogenized webservices/APIs
- Includes throughout the project an economic analysis of the **added-value of the tools** through consultation of users, **preparing a potential exploitation.**

**Altogether : a demonstrator of CS tailored for ski resorts**
